

**ROCKsafe®**

A SMARTsafe Training, Mine Suite Solution

## YOUR SAFETY CHALLENGE:-

Rockfalls are a major hazard in underground mines, with consequences ranging from insignificant to catastrophic. The risk to personnel and damage associated with rockfalls must be managed. Mine owners/managers are obliged to minimise risk and to maximise staff safety by ensuring that all personnel are adequately trained to a competent level, this obligation extends to rockfall.

## ROCKsafe® is THE ANSWER: -

The ROCKsafe® solution has been developed in conjunction with a RTO who is an industry leader in the development of training for the mining industry. This first in a range of solutions was developed to provide Australian Metalliferous Underground Mines with a comprehensive competency based training package targeting Rockfall Risk Management. The solution is in line with the newly released industry guidelines and national competency standards.

- ✓ a simple yet comprehensive, competency based training course and support materials that is relevant, up-to-date, easy to understand
- ✓ the product can be purchased in its generic format or can be customised to reflect your site-specific geotechnical structures, procedures, equipment etc, and to identify your site's unique rockfall risks
- ✓ the training facilitates communication between your engineers and mine personnel - ensuring that they are all "speaking the same language" and "understanding" each other
- ✓ on meeting the requirements of a RTO they will also be eligible to receive Statements of Attainment for their training
- ✓ implementing ROCKsafe® into your training program will result in safer mine personnel, safer minesites and assist with your safety compliance

The SMARTsafe® ROCKsafe® solution is the first available retail training product of its kind in Australia. Purchase ROCKsafe® now and discover how minesite-specific Rockfall Risk Management Training that meets all national competency standards, can be developed and delivered quickly, easily and cost-effectively. Look forward to a dramatic and immediate increase in the effectiveness of your sites rockfall risk management strategies and practices, as well as increased personnel competency levels. Move one step closer to your goal of fatality and injury free underground mining!

## FACT

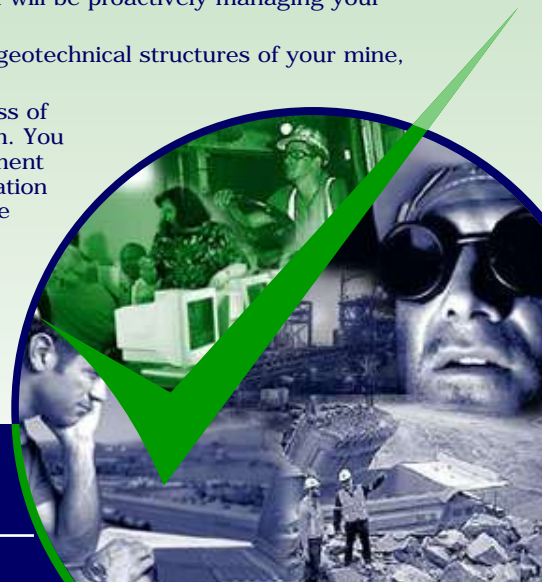

The Australian Minerals Council has identified the development of industry-wide "enhanced competency based training" as a key solution to help eliminate rockfall as a cause of fatality in the minerals industry. Newly released industry guidelines and competency standards in relation to rockfall have brought the industry one step closer to its objective.

SMARTsafe's<sup>®</sup> ROCKsafe<sup>®</sup> solution has been developed to facilitate the achievement of this industry objective, the solution enables mining operators to quickly and effectively implement competency based rockfall risk management training, that is in line with all national standards, into their minesites.

## BENEFITS

- ✓ A simple yet comprehensive, competency based training course and support materials that is relevant, up-to-date, easy to understand and in line with both industry guidelines and all national competency standards for underground metalliferous mining;
  - MNMUGC101.A - Set-up and Prepare for Ground Control and
  - MNMUGC102.A - Conduct Ground Support Operations.
- ✓ Courses actively facilitate communication between your engineers and your miners - ensuring that they are all "speaking the same language" and "understanding" each other.
- ✓ Courses will make your staff stop and think about rockfall, allowing them to better determine risk and risk management strategies as they work regardless of the situation they are confronted with. This means that your staff will be proactively managing your rockfall risk.
- ✓ ROCKsafe<sup>®</sup> can be utilised in its generic form or fully customised to reflect the site-specific geotechnical structures of your mine, ensuring that your staff get the training they require to be safe on your minesite.
- ✓ If you choose to have a fully customised ROCKsafe<sup>®</sup> training program developed, the process of customisation can identify your sites unique rockfall risks, allowing you to best manage them. You will also be able to incorporate site-specific photographs, SOP's, procedures, PPE and equipment into your training program. Best of all you can rest easy in the knowledge that the customisation process will be undertaken in consultation with your key staff by a RTO who is a leader in the development of training programs for the Mining Industry, namely Performance Training Pty Ltd [www.pertrain.com.au](http://www.pertrain.com.au).

### ...still more BENEFITS

- ✓ To develop a similar quality solution in-house will require significant in-house knowledge, time, commitment, and investment, while providing no guarantee that the final product will be either what you are looking for or will meet national standards. When you purchase ROCKsafe® you know in advance the quality of the training program you will end up with and you are assured that your program meets the new national competency standards.
- ✓ All personnel who complete the training and are then successfully assessed by a RTO (whether that is your training department, Performance Training Pty Ltd or another provider of your choice) can be issued with a Statement of Attainment for the national competencies.
- ✓ Your OH&S Manager, Risk Manager and Operations Manager can all concentrate on the job of implementing your sites training program and building safety awareness, free from the time consuming tasks of developing the content, systems and tools required to support the process.
- ✓ Implementing the ROCKsafe® training program will result in a dramatic and immediate increase in your sites' rockfall risk management strategies and practices, as well as, increased personnel competency levels. This is certain to assist in reducing rockfall related fatalities, incidents, accidents and operational costs in your minesite.
- ✓ Implementing ROCKsafe® into your training program will result in safer mine personnel, safer minesites and assist with your safety compliance.

### FEATURES

- ✓ The product includes A Trainers Guide and comprehensive support materials including; a highly illustrated Learners Manual and PowerPoint presentations.
- ✓ The content meets the Australian Competency Standards MNMUGC101.A - Set-up and Prepare for Ground Control and MNMUGC102.A - Conduct Ground Support Operations.
- ✓ Upon completion of training a RTO can assess students and provide Statements of Attainment.
- ✓ When purchasing your ROCKsafe® solution you will choose from the following options;
  1. The standard generic format
  2. The generic product in a standard co-branded format
  3. A fully customised training program to meet your site-specific requirements.
  4. Request additional Learners Manuals
  5. Request that the theoretical component of this program be converted to Computer Based Training format.
- ✓ Customisation must be undertaken by Performance Training Pty Ltd [www.pertrain.com.au](http://www.pertrain.com.au) who are an authorised SMARTsafe® ROCKsafe® Training Consultant and a leading RTO specialising in the development of training programs for the mining industry. They will work with geotechnical experts as required.
